

Snow plough accessories

Snow scrapers for snow ploughs.

Snow scrapers are preformed plates which consist of a textile ply in rubber mixture.

The plate is manufactured with textile fibers and rubber in the following proportions:

70% fibers - 30% rubber. The fibers lead to a good capacity to scrape snow with good abrasion resistance and rigidity.

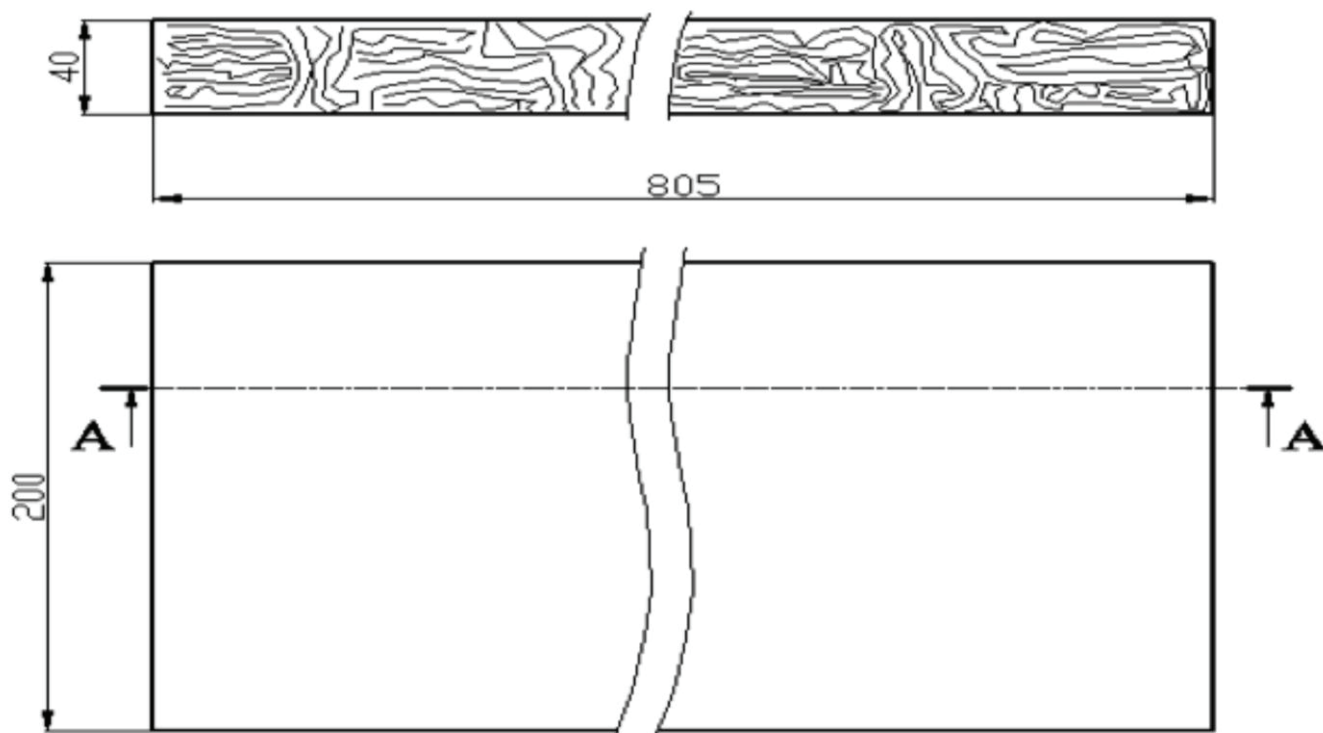

The composition of the snow scrapers:

a) the rubber content: SBR rubber

b) the fiber content: polyester and polyamide uniformly dispersed.

They are ideal for explorations in areas with a temperate climate: ambient temperature: -25°C to +5°C.

They are usually in contact with asphalt, water, ice, snow, salt and sand.

DIMENSIONS	Thickness, mm	40
	Length, mm	805
	Width, mm	200
CHARACTERISTICS	VALUE	
Hardness, (°Sh A)	80±5	
Tensile strength - kgf/cm ²	50	
Elongation at break, (%)	200	
Abrasion resistance, mm ³	250
