

ARTEGO SA

Chevron Belt 16-540

Designed and manufactured in Europe by ARTEGO S.A., the Chevron 16-540 conveyor belt represents the benchmark of excellence for inclined bulk-material conveying. Engineered specifically to prevent material slippage and to maximize transported volumes, this profiled belt enables conveying angles of up to 45°, in applications where standard flat belts become inefficient.

KEY ADVANTAGES

Efficient Profile Design (16 mm height)

The robust 16 mm Chevron profile is vulcanized directly onto the belt's top cover, ensuring exceptional durability, zero risk of detachment, and outstanding abrasion resistance. It features a 90° central angle and a 15 mm apex opening, specifically engineered to support self-cleaning, preventing material build-up along the belt centerline and guaranteeing a clean, efficient discharge.

EUROPEAN QUALITY ASSURANCE

Built to International Standards

Manufactured in full compliance with DIN norms and ISO quality standards, this product delivers excellent flexibility, enhanced tensile strength, and long service life even in demanding operating environments.

TECHNICAL SPECS

Profile height	16mm
Profile width (base/top)	20mm / 10mm
Pattern width: Conveyor belt width: Profiles pitch:	540mm 600-800mm 250mm
